

Jet Set-4 Provisional Restoration Gallery

Compliments of **Dr. Masao Yamazaki**, Harajyuku Dental Office, Japan

About Dr. Yamazaki:

Dr. Yamazaki is one of the leading dentists in esthetic dentistry in Japan. His dental clinic is located downtown Tokyo and focuses on comprehensive dental care with state-of-the-art dental technology. Along with his commitment to the day-to-day clinical practice, he is also devoted to modernizing the Japanese dental community through education for dentists. In the 1980s, he established a study group, called SJCD (Society of Japan Clinical Dentistry) which is now the largest group in Japan with 1700 members. As chairman of the International SJCD and a supreme adviser of Tokyo SJCD, Dr. Yamazaki is well respected and travels extensively, giving lectures to dental professionals throughout Japan and worldwide.

Provisional crowns and bridges are extremely important in restorative treatment. The provisional restorations will be increasing in value with the greater acceptance of CAD-CAM technology in the treatment.

Jet Set-4 acrylic is used in the case presented here. I am impressed with its high esthetics and durability, not to mention its good workability.

Provisional restoration cases using Jet Set-4 Acrylic

Restorative area

7654321	123456
7654	456

Diagnostic wax-up

Provisional restorative transferred from the diagnostic wax-up. Even after 6 months it looks well preserved.

Final restorations

Final restoration cross-mounted from the provisional crown restoration which looks highly aesthetic.
